

17 September 1958

Miss Evelyn L. Pruitt
Geography Branch
Office of Naval Research
Department of the Navy
Washington 25, D. C.

REFERENCE: ONR:414:ELP:cc, 30 July 1958

Dear Miss Pruitt:

I have reviewed the previous bibliography on photogrammetry compiled by Ohio State University during 1951-1953 and consider it a creditable job. Since then the Library of Congress has published a bibliography entitled "Bibliography of Photo Interpretation Techniques," dated March 1956, by Dwire and Waldron, under contract to ATIC. Dr. Waldron has advised me that they are now bringing this bibliography up to date. Both editions are international in scope and carry brief abstracts of each title. The bibliographies have the weakness of omitting the photographic and reconnaissance phases of P.I.

[redacted] of the Navy Photographic Interpretation Center, advises me that the American Society of Photogrammetry has prepared an inventory of publications on photographic interpretation and that the International Society of Photogrammetry is compiling a bibliography on P.I. covering publications in professional journals on an international basis.

STAT

Unless Ohio State University would like to fill the gaps in the above mentioned bibliographies and cover aerial photography and aerial reconnaissance on an international basis, I would recommend against their proposal on the basis that it would be a duplication of effort.

For Mr. Arthur C. Lundahl -

Sincerely,

[redacted]
